REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The claims are allowable for at least the following reason: The cited claims detail an agent created distributed read and writer's lock for each of a plurality of object management systems components executing on corresponding object management systems that control access to information shared by the system components that offloads management of a stub interface to a list controller that maintains a communications list and is adapted for communication with a communications controller. None of the prior art of record teach the disclosed read and writer's lock on a plurality of object management systems that functions similar to the one disclosed in the claims. U.S. Patent 6,601,120 teaches a multi-read/single writer lock implemented on a plurality of computers that enables access to a shared resource. The cited reference does not allude to the type of lock functions and communicating structures, i.e. a language interface and list controller containing the offloaded management of a stub interface as disclosed in the cited claims. The remaining prior art of record discloses the synchronizing of object systems or the communication of data between object systems through a list structure, however, this synchronization or communication is does not use the cited lock as defined in the claims. Therefore, the claims are allowable over the cited prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
